

Mobile and Laptop Accessible Document Library

Mobile and Online Document Sharing Made Easy

Does your sales team struggle to access and share online documents quickly and conveniently? Especially if they are increasingly relying on their smartphone or tablet to do these critical tasks?

KDG InterActive offers you and your sales team a solution that is an easy-to-use mobile and online library system with the ability to publish, manage and share mission critical, just-in-time documents.

Directly supporting sales & marketing, this document library system offers your sales representative convenient access from a mobile smartphone, tablet or the desktop to help streamline the sales process.

The value of having your own sales online library enables better efficiencies and thereby supports improved sales performance amongst your sales team. With convenient access to critical document information, sales representatives will be better equipped to support customers while remote or at a client's site. Having access to just-in-time online documents can greatly aid in the sales process, offering your sales representative the advantage of answering customer's questions and further education of your company's products and services in a time critical manner.

Designed in mind for mobile users who are on the go, all current popular smartphones and tablets can conveniently access the document library via the web. This application is user-friendly and powerful with advanced search capability enabling you to quickly locate and view your selected file.

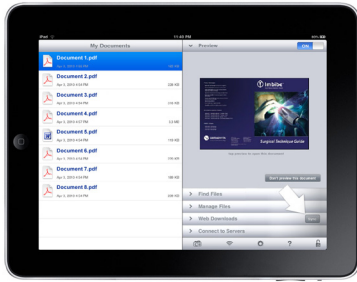

KDG InterActive develops effective web 2.0 solutions that offer proven business results for your organization. Established in 1991, we continue to be at the forefront of successful technology & communications solutions.

Utilizing your current smartphone or tablet, the document library gets you the file you want to view quickly and conveniently with either category selection or advanced keyword search. View modes include the popular PDF format and a 'quickview' via text and jpeg. Smartphone platforms, including BlackBerry and Android, require a PDF viewing app to view the file in an ideal format. With the iPad, the GoodReader app provides a convenient way to access your library of local pdf files in addition to automatic synchronization to the web-based master library.

In addition to mobile access, you can directly access your document library via your web browser on your desktop computer. The web 2.0 version of the document library is designed to run on current popular browsers including Internet Explorer, Firefox, Chrome and Safari. Files are accessed via a rich web interface that includes direct menu access in addition to a thumbnail file preview mode. Files can be accessed via icon menus or via advanced keyword search. Popular file formats supported include Adobe® PDF, PowerPoint®, Word®, and Excel®.

The online master document library administrator's tool offers a convenient means to manage and upload your master documents. You can manage multiple libraries, each with the ability to define multiple directory levels. If the document you upload is a PDF file (which is oftentimes the most desired format), you will be able to convert it to a format that consists of live text and jpeg images which provides a very quick download. This is most beneficial if you are accessing remote via a smartphone and do not want to commit to a large PDF file download.
